

The Boundless Quality Assurance team will use BrowserStack to help leverage tests on multiple platforms and browsers to lessen the requirements and limitations of standing up multiple VM's to obtain desired testing environments.

Boundless Exchange server to client side testing using the BrowserStack tool will help to increase the testing and encourage the overall QA framework growth by allowing for simplified, standardized, and enhanced functional & integration testing in SCRUM Sprint cycles and Release Candidate Sprints.

Leveraging BrowserStack will promote better Quality by increasing coverage, reducing risk, and help promote efficient QA integration testing and verification and validation processes in multiple client side environments.
